At least one child in your class could have a mild hearing loss

This can have a major impact on all aspects of a child’s development, including language and literacy skills, working memory, attention and concentration, and social skills.
Mild hearing loss has a particularly big impact in the early years.

Adults with a hearing loss can sometimes ‘fill in the gaps’ of what they’ve not heard by thinking about the situation, drawing on past experiences and making an educated guess at what someone has said.

Younger deaf children can’t do this because they haven’t had the chance to build up a vocabulary or memory of what someone might say in a particular situation.

A child with a mild hearing loss can miss up to 50% of what’s being said in the classroom.

Less than half of children with a mild hearing loss get five good GCSEs.

But with the right support from professionals like you they can achieve as well as other children.

47% of parents of a child with a mild hearing loss feel that their child is behind for their age.
### Signs of mild hearing loss in a child

<table>
<thead>
<tr>
<th>Minimal response to name</th>
<th>Constantly asks for speech to be repeated</th>
<th>Watches faces/lips intently</th>
</tr>
</thead>
<tbody>
<tr>
<td>Doesn’t always follow instructions straightaway</td>
<td>Often misunderstands or ignores instructions</td>
<td>Makes little or no contribution to group discussions</td>
</tr>
<tr>
<td>Watches what others are doing before doing it themselves</td>
<td>Complains about not being able to hear</td>
<td>Often needs help from their friends</td>
</tr>
<tr>
<td>Tires easily</td>
<td>Talks too loudly or too softly</td>
<td>Becomes easily frustrated</td>
</tr>
<tr>
<td>Appears inattentive or as though daydreaming</td>
<td>Plays alone and doesn’t engage with group social activities</td>
<td></td>
</tr>
</tbody>
</table>

**Remember:**
Mild hearing loss can fluctuate. Children may display some of the above signs on some days but not others.
What can you do to help a child with a mild hearing loss?

Many of these steps will benefit all the children you work with.

Reduce background noise as much as possible, for example: turn off any equipment – like overhead projectors and computers – when not in use. Shut the door if there is outside background noise.

Ensure communication is clear and effective.

- Check that you have the child’s attention before you start talking.
- Speak clearly and at your normal level and pace – speaking too slowly or exaggerating mouth patterns will make you harder to understand as it distorts speech.
- Make sure that the child can see your face clearly – putting something in front of your face or turning to write on the whiteboard will make it harder to hear and impossible to lip-read.
Make the most of hearing technology, such as soundfield systems (which project the teacher’s voice across the classroom). Be aware that some children may be reluctant to use hearing technology – gently encourage and support them.

Factor in plenty of breaks as children with mild hearing loss have to concentrate harder than their peers, which can lead to tiredness (more information at www.ndcs.org.uk/tired).

Check there has been a full assessment of the child’s needs, relating to their hearing loss. Seek advice from a specialist Teacher of the Deaf on this.
Always talk to the child’s parents – they will have lots of ideas and suggestions.

Contact the local specialist education support service for further advice and support from a Teacher of the Deaf.
